Profile

B.Tech Computer Science student (graduating 2026) with hands-on full-stack development experience across React, Next.js, Node.js, and AWS — building production-style platforms with role-based auth, real-time systems, and payment integrations.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, C#

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, GSAP, Three.js

Backend & Systems: Node.js, Express.js, REST APIs, WebSockets

Databases: PostgreSQL (PostGIS), MongoDB, Redis, SQL, Prisma, Drizzle ORM

Cloud & DevOps: AWS (EC2, S3, Cognito, CloudWatch, IAM), Docker, Linux, Bash scripting, Git, CI/CD pipelines

Experience

Software Engineer Intern — Agaamin Technologies — Gurugram, India

June 2024 – Aug 2024

- Built full-stack web features for the company's identity platform — a domain-name-as-identity service (e.g. ashim.bh3, ashim.indian) that maps branded usernames to a user's verified digital profile including email, social accounts, and payment details.
- Designed a 2-step Aadhaar-linking flow (domain lookup → OTP-verified Aadhaar submission) in React.js, with a Node.js/Express backend handling OTP verification and secure association to the user's domain identity.
- Built 2 REST API endpoints for UPI payment-detail retrieval, surfacing a user's linked bank handle to enable one-click payment initiation through their domain identity.
- Stored identity data on AWS S3 using IAM user-based access control to restrict data access, and hosted the platform on AWS EC2, managing environment configuration for production.

Projects

Rentiful — Cloud-Based Rental Platform | [GitHub](#)

- Built a full-stack rental platform (Next.js, Express, PostgreSQL/PostGIS) with 2-role access control (tenant/manager) and AWS Cognito authentication.
- Designed and integrated 17 RESTful API endpoints across properties, applications, and leases, using Prisma for structured schemas; added Mapbox-based geolocation search and automatic address geocoding.

QuickShow — Full-Stack Ticket Booking Platform | [GitHub](#)

- Built and deployed a full-stack ticket booking platform with real-time seat reservation, Stripe payments, and Clerk authentication, backed by MongoDB.
- Implemented 10-minute time-boxed seat holds with automatic release on timeout via Inngest event-driven workflows; automated booking-confirmation emails and reminder emails sent 8 hours before showtime via Brevo/Nodemailer.

Sportz — Real-Time WebSocket Backend | [GitHub](#)

- Built a real-time sports backend with REST APIs (matches, commentary) and a WebSocket layer supporting per-match subscribe/unsubscribe, broadcasting live match and commentary events to subscribed clients.
- Used PostgreSQL with Drizzle ORM for data persistence, Zod for request validation, and Arcjet for WebSocket connection security.

Urban Sprawl Analysis and Prediction of Indore Using Multi-Temporal Landsat, Machine Learning, and CA-Markov Modelling

- Built a three-model pipeline (Random Forest + U-Net CNN + CA-Markov) in Python to classify 25 years of harmonized Landsat imagery and predict 2030 urban expansion for Indore, India.
- Achieved RF OA = 0.95, U-Net OA = 0.82, CA-Markov validation OA = 0.71 on unseen 2025 data; predicted built-up area will grow +20.8% by 2030.

Leadership & Extracurricular

Organizing Team Member — Adventure Club, BML Munjal University

- Coordinated 2 outstation trips for groups of 20–30 students, negotiating pricing and logistics with external vendors and managing end-to-end delivery (payments, itineraries, and real-time issue resolution).

Education

BML Munjal University

2022 – 2026

B.Tech in Computer Science

Certifications: MERN Stack — Hero Vired | AWS Fundamentals — Coursera
